

# QUALITY & SAFETY

With a SUNAIR® you can rest assured that you bought one of the finest awnings on the market. That is because...the Sunair Awning is “Type tested for safety approval” by TUV PRODUCT SERVICE.

TUV is for safety. It is an international organization that tests everything from components to manufactured consumer products.

In fact, Sunair has a GS certificate which means that our entire system was tested to the following DIN specifications, not just a component BAU certificate like many of our competition.

**DIN VDE 1000**      **General principles for safety design of technical products.**

**DIN 1055- 4/A1**      **Design loads for buildings; imposed loads; wind loads on structures unsusceptible to vibration.**

**DIN VDE 0700-238**      **Safety of household and similar electrical appliances.**

In addition, TUV performs an annual factory inspection at our Jessup, MD plant to ensure that the product is made with consistency and remains compliant with the originally tested design.

You may find our listing at [www.tuvamerica.com](http://www.tuvamerica.com)

Directions:      Click on Customer center and then on client list, and then on the *TUV Products & Service database*. Type in “Sunair”, and our name will appear. If you click on the name, our certificate number will appear.

**SUNAIR® is the clear choice!**

***Make sure that the awning installed on your house is TUV approved and... has an American GS certificate!***
